

Connect it DS

Flexible high purity OFC copper conductor & silver plated connectors

Line & Phono Cable:

Conductors: 99.99% OFC copper

Cable Capacity: 90 pF (1,23m)

Speaker Cable:

Conductors: 8x 0,75mm² bare copper

Jacket: Transparent PVC + DS Jacket

1	Line DS RCA	0,41 / 0,82 / 1,23 / 1,85m	MSRP 149,00€ - 179,00€
2	Line DS XLR	0,41 / 0,82 / 1,23 / 1,85m	MSRP 159,00€ - 209,00€
3	Phono DS RCA	1,23m	MSRP 179,00€
4	Phono DS 5P / RCA	1,23m	MSRP 199,00€
5	Phono DS 5P / XLR	 1,23m	MSRP 199,00€
6	Phono DS 5P / mini XLR (f)	 1,23m	MSRP 199,00€
7	Phono DS RCA / mini XLR (f)	 1,23m	MSRP 199,00€
8	Phono DS mini XLR (m) / mini XLR (f)	 1,23m	MSRP 199,00€
9	Phono DS mini XLR (m) / XLR (m)	 1,23m	MSRP 199,00€
10	LS DS	3,0 / 4,0m	MSRP 279,00€ - 299,00€

The importance of quality cables

Cables are not able to make your sound system sound better, but they ensure that every detail and information of the signal is transmitted to the dedicated receiving device. Using a poor cable can limit your whole HiFi setup and definitely can be the bottleneck of your sound experience. You can compare it with cars: A sports car with bad tyres still has a lot of power, but it won't be able to bring the performance onto the road. The same applies to sound systems. The best turntables, amplifiers, etc. need quality cables to deliver their full performance.

Our new „Connect it“ cable lineup covers all your needs and not only offers different connection types & technologies, but also various conductor & plug materials.

With our experience of 30 years in HiFi we focused on four cable lines which focus on dedicated materials and built types.

The „Connect it DS“ line cables are real audiophile cables made in Europe!

The magic is always in the details

The „Connect it DS“ signal cables use a high purity OFC copper conductor. Its low capacity makes them perfect for phono applications. The shielding is done with a OFC copper helix with a carbon saturated conductive sub-jacket which offers a perfect protection, but also great cable flexibility.

The Connect it LS DS speaker cable uses eight 0.75mm² solid core conductors, which minimizes signal loss due to the low impedance. The twisted construction reduces possible interferences and noise picked up in the signal transmission.

All DS-Line connectors use silver plated signal pins, which offers a higher conductivity with the lowest contact resistance compared to gold. As you may know from your silver knives and forks at home, silver can oxidate. Don't worry, this is just an optical issue, because silver oxide is as conductive as silver itself.
