

# Pre Box S2 Digital & Stream Box S2 Ultra

**"Rarely has HiFi been as understated as here. The sound was great! "**

*The app check:*

*Pro-Ject Play is basically an Italian open source app that is constantly developing. The range of functions is already large, but sometimes difficult to understand (Shairport = AirPlay, type of mixer = volume control via soft- or hardware). Many streaming services are already supported, some great functions are unlocked little by little.*

Exemplary neutrality went hand in hand with very fine resolution and decent dynamics. The dry, powerful bass and especially the meticulous reproduction of the recording room stood in extreme contrast to the dimensions of the Pro-Ject boxes.

It does not happen very often that you can not get out of astonishment as a tester. Especially not with components that are more nano than mini. With the hidden gadgets I was able to fill my next novel, as well as with the planned innovations from the pipeline of the open source app. But what impresses the most sustainable is the completely convincing sound. These dwarfs are really huge.

**Pre Box S2 Digital**  
+ neutral, lively sound with great punch and clean bass

**Features: very good**  
**Operation: very good**  
**Processing: very good**  
**Sound rating: 115 points**  
**Price /Performance: Outstanding**

**Stream Box S2 Ultra**
